

Filtering & Moderation Software

CleanSpeak is a complete filtering and moderation software package that assists businesses in quickly and easily managing their online communities. CleanSpeak filters out profanity, personal identifiable information and other unwanted content in real time.

FEATURES INCLUDE

API

Simple RESTful API providing easy integration and accessibility.

User Profiling

Focus valuable time and effort on escalated problem users.

Advanced Filtering

Filter profanity, obscenities, ascii art, emails, URLs, phone numbers, BBCode and much more.

User Tracking & Scoring

Intuitive dashboard allows for viewing historical user information, tracking & scoring.

Kidsafe Filtering

Allow kids to express themselves with CleanSpeak's whitelist capabilities.

Reporting

Track moderator actions and conversations. Keeping the team efficient and communicative.

Customizable Lists

Intuitive management interface. Easily build custom lists and modify default blacklist.

Workflow

Assign moderator roles and implement workflows while successfully managing the community and internal operations.

Pre Moderation Queues

Review user content to approve or reject prior to posting within the community.

User Discipline

Set up automated warnings and actions preventing troublesome users from disturbing the community.
